*stations on 3 of 4 units

The Trades & Tech Truck operates in two versatile formats, allowing Skills Ontario to customize each visit to meet the unique needs and goals of your event.

Light Touch/Open House

Perfect for events with a variety of exhibitors, the Trades & Tech Truck offers a flexible setup where attendees can easily explore and engage at their own pace. This approach is a proven success at career fairs, trade shows, and community events, ensuring a dynamic and interactive experience for all.

In Depth/Structured Approach

This approach focuses on small groups of 10–20 individuals for 30–60 minutes, with group size and session length tailored to the goals of the booking. It's ideal for school visits, summer camps, and events where coordinators aim to engage a targeted audience through the Trades & Tech Truck.

Requirements for Truck Visits:

The units require a space of 50ft in length by 30ft wide on flat firm ground to fully set up. This space needs to be clear of low hanging branches. The units are 13.6ft tall. We are equipped with two onboard generators for power for outdoor events. For indoor events we require specialized power hook up. Please contact us for those details.

Booking a Truck Visit:

Our fleet is expanded to four units, that means more availability of experiential opportunities across the province. The units are available year-round for single day & multiple day events. Please visit our website for additional booking and cost details.
